

Here's your Doctor Discussion Guide.

Use it to start a conversation with your doctor about managing your hepatitis C (hep C).

Information for your doctor:

- I was diagnosed with hep Cyears.....months ago
- I have been on the following hep C treatments
- I'm currently experiencing (check all that apply):
 - Fever
 - Vomiting
 - Joint pain
 - Fatigue (feeling tired)
 - Abdominal pain (pain in the gut)
 - Jaundice (yellow coloring of the eyes or skin)
 - Loss of appetite
 - Dark urine
 - Nausea (upset stomach)
 - Clay-colored stools
 - Depression

Additional questions to ask your doctor:

- Do I need any other tests?
- What's my genotype and what does that mean?
- How does my genotype affect my treatment options?
- Do I need a fibrosis test?
- What is a fibrosis score?
- What should I know about treatment options?
- Do I have any conditions or take any medications that might affect my treatment options?
- How long will treatment take?
- How will I know if I've been cured?
- What are some possible side effects of treatment?
- How much will treatment cost?
