

It's time to get cured* of hepatitis C (hep C).

Use this guide to help you get the conversation started with a healthcare professional about curing* your hep C.

*Cure means the hep C virus is not detectable in your blood months after treatment has ended.

You may want to ask your healthcare professional:

-  Am I ready to start treatment? _____

-  Is treatment easy to take? _____

-  How long will treatment take? _____

-  What are the possible side effects of treatment? _____

-  How affordable is treatment? _____

-  Is there anything else I need to do before starting treatment? _____

-  How will I find out I've been cured*? _____

Your healthcare professional may ask about:

Any history of addiction or drug use

The medications you're currently taking

Other relevant medical information

Keep in mind that your healthcare professional is there to help you while you take this next step in curing* your hep C. Use the space below to take note of any other questions or concerns you want to discuss.
